DECORATION TECHNIQUES

HEAT TRANSFER

ESSENTIAL PRODUCT INFORMATION

Due to the nature of 100% polyester fabrics, special care must be taken throughout the decoration process when heat is applied for curing. Please consult with your decorator or material supplier.

Due to the nature of water resistant coatings, special care must be taken throughout the decoration process. An ink catalyst additive or special adhesive heat transfer is required. Please consult with your decorator or material supplier.

TIPS FROM OUR EXPERTS BY DECORATION TECHNIQUE

HEAT TRANSFER

A graphic, name and or number applied to a textile with a heat press. Great for quantities of any size, sports name and numbering, fashion, performance wear, print on demand programs and on-site decorating events.

Do not package product until completely cool. Cooling stations are recommended.
For best results when using heat applied consumables to avoid a color or sheen change, it is recommended to use a protective foam application pad.
Heat transfers with an aggressive adhesive are required for stain release, water resistant/waterproof coated and nylon fabrics.
We recommend not to exceed 300° during application.

It is a best practice to consult with your decorator or consumable supplier(s) for accessories, specialty frames and applications that are specific to a shop's setup and equipment.
